ASSIGNMENT HISTORY FOR US PATENT AVAILABLE IN LSUS DISPLAY FORMAT

ED Entered STN: 25 Oct 2007

AB This flexible energy storage device comprises a flexible housing, an electrolyte contained within the housing, an anode and cathode with current collectors and anode/ cathode material supported on the current collector. The current collector consists of a fabric substrate and an electron-conductive material. The electron-conductive material contains voids to enable penetration of the current collector by the electrolyte.

 AB The battery comprises a separator between a cathode and an anode, and a Li
 salt-containing nonaq. electrolyte solution; where the electrolyte solution
 uses an ionic liquid solvent containing a bis(fluorosulfonyl)imide anion as an
 anion component and exhibiting a voltage of ≥ 3.6 V in a full charged state and
 a discharge average voltage of ≥ 2.9 V in terms of one hour discharge rate.

ASSIGNMENT HISTORY FOR US PATENT AVAILABLE IN LSUS DISPLAY FORMAT

ED Entered STN: 25 May 2007

AB Elec. double-layer capacitor having superior cycle characteristics and high-current discharge/charge characteristics with capacity for reducing capacitance decreases and resistance increases on high current cycles is claimed. The elec. double-layer capacitor comprises an electrode portion composed of an anode and a cathode; a separator for providing elec. isolation between the anode and cathode; and an electrolyte solution which is filled in a space between the anode and cathode so as to form elec. double-layers on surfaces of the anode and cathode upon application of a predetd. voltage, and in which a solvent and a solute are mixed so as to have a concentration of 1.25 to 2.5 mol/L.

IT 55526-39-1D, Pyrrolidinium, salts 69444-51-5, Dimethylpyrrolidinium tetrafluoroborate 117947-85-0, Ethylmethylpyrrolidinium tetrafluoroborate 345984-11-4 (elec. double-layer capacitor with adjustment of electrolyte to give superior properties)

ASSIGNMENT HISTORY FOR US PATENT AVAILABLE IN LSUS DISPLAY FORMAT

ED Entered STN: 24 May 2007

AB Disclosed herein is a hybrid battery using an electrochem. stable electrolyte composition and electrodes suitable for use in the electrolyte composition. The hybrid battery is non-toxic and highly stable, and has improved high-current charge/discharge characteristics. The hybrid battery comprises an electrode unit consisting of an anode and a cathode, a separator for elec. separating the anode and the cathode, and an electrolyte filled in a space between the anode and the cathode so as to form an elec. double layer on surfaces of the anode and cathode when a voltage is applied wherein the electrolyte contains a mixture of a lithium salt, an ammonium salt and a pyrrolidinium salt as solutes in a carbonate-based solvent so that the solute mixture has a concentration of 1.0-2.5 mol/L.

AB Charge-discharge cycling tests of a Li/LiCoO₂ cell containing ionic liqs.
 based on bis(fluorosulfonyl)imide ([FSI]-) as the electrolyte revealed better
 rate properties than those of cells using conventional ionic liqs. The use of
 an 1-ethyl-3-methylimidazolium (EMI+) salt permitted the retention of 70% of
 the discharge capacity at a 4 C current rate. But similar performance of

cells containing N-methyl-N-propylpyrrolidinium (Py13+) and N-methyl-N-propylpiperidinium (PP13+) salts of [FSI]⁻ was limited to operation at 2 and 1 C current rates, resp. The charge/discharge cycling stability of the cell with Py13[FSI] was much better than that of a cell with EMI[FSI].

AB As an alternative technique to lead-acid batteries, the present invention provides an inexpensive 2 V nonaq. electrolyte secondary battery having excellent cycle life at a high rate by preventing volume change during charge and discharge. The nonaq. electrolyte secondary battery uses: a pos. electrode active material having a layered structure, being represented by chemical formula $\text{Li}1\text{ta}[\text{Me}]02$, where $0 \leq a < 0.2$, and Me is a transition metal including Ni and at least one selected from the group consisting of Mn, Fe, Co, Ti and Cu, and including elemental nickel and elemental cobalt in substantially the same ratio; and a neg. electrode active material including Li4Ti5O12 .

ASSIGNMENT HISTORY FOR US PATENT AVAILABLE IN LSUS DISPLAY FORMAT

ED Entered STN: 31 Mar 2006

AB A nonaq. electrolyte battery that contains a molten salt electrolyte and has the enhanced output performances and cycle performances can be provided. The electrolyte has a molar ratio of lithium salt to molten salt of from 0.3 to 0.5, and the nonaq. electrolyte battery has a pos. electrode having a discharge capacity of 1.05 or more times that of a neg. electrode thereof.

ASSIGNMENT HISTORY FOR US PATENT AVAILABLE IN LSUS DISPLAY FORMAT

ED Entered STN: 15 Jul 2005

AB An electrochem. element for use at a high temperature has an anode , a cathode comprising an intercalation material having an upper reversible-potential-limit of at most 4 V vs. Li/Li+ as active material, and an electrolyte arranged between the cathode and anode, which electrolyte comprises an ionic liquid with an anion and a cation comprising a pyrrolidinium ring structure having four C atoms and one N atom. Expts. revealed that rechargeable batteries comprising such an intercalation material and N-R1-N-R2-pyrrolidinium, wherein R1 and R2 are alkyl groups and R1 may be Me and R2 may be Bu or hexyl, are particularly suitable for use at a temperature of up to about 150° and may be used in oil and/or gas production wells.

ED Entered STN: 12 May 2005

AB As an alternative for Pb-acid batteries, an inexpensive 2 V nonaq.
 electrolyte-based secondary battery is presented. The battery has a good cycle
 lifetime at high rates due to prevention of volume changes during charging and
 discharging. This secondary battery has a cathode-active material with a
 layered structure, represented by $\text{Li}_{1-x}\text{[Me]O}_2$, where $0 \leq x < 0.2$, and Me is a
 transition metal including Ni and at least one selected from Mn, Fe, Co, Ti
 and Cu, and including elemental Ni and elemental Co in substantially the same
 ratio. The battery also has an anode-active material, $\text{Li}_4\text{Ti}_5\text{O}_{12}$
 ($\text{Li}[\text{Li}_{1/3}\text{Ti}_{5/3}\text{O}_4]$).

 FC OR SOFC OR DFC OR PEMFC
 L40 QUE SPE=ON ABB=ON PLU=ON ANODE# OR NEGATIVE ELECTRODE#
 L41 QUE SPE=ON ABB=ON PLU=ON CATHODE# OR POSITIVE ELECTRODE#

 L42 403 SEA SPE=ON ABB=ON PLU=ON L21 AND L39
 L43 73 SEA SPE=ON ABB=ON PLU=ON L42 AND L40 AND L41
 L44 45 SEA SPE=ON ABB=ON PLU=ON L43 AND L38
 L45 12 SEA SPE=ON ABB=ON PLU=ON L44 AND (L22 OR L23 OR L24 OR
 L25 OR L26 OR L27 OR L28 OR L29 OR L30 OR L31)
 L46 1 SEA SPE=ON ABB=ON PLU=ON L45 AND L1
 L47 91 SEA SPE=ON ABB=ON PLU=ON L21 AND L40 AND L41
 L48 1 SEA SPE=ON ABB=ON PLU=ON L47 AND L31
 L49 19 SEA SPE=ON ABB=ON PLU=ON L47 AND (L22 OR L23 OR L24 OR
 L25 OR L26 OR L27 OR L28 OR L29 OR L30 OR L31)
 L50 94152 SEA SPE=ON ABB=ON PLU=ON L20
 L51 3 SEA SPE=ON ABB=ON PLU=ON L49 AND L50
 L52 19 SEA SPE=ON ABB=ON PLU=ON L49 OR L51
 L53 QUE SPE=ON ABB=ON PLU=ON ION?(3A) (LIQUID? OR FLUID?)
 L54 14 SEA SPE=ON ABB=ON PLU=ON L52 AND L53
 L55 19 SEA SPE=ON ABB=ON PLU=ON L52 OR L54
 L56 19 SEA SPE=ON ABB=ON PLU=ON L45 OR L55
 L57 8 SEA SPE=ON ABB=ON PLU=ON L56 AND (1802-2006)/PRY,AY,PY
 L58 13 SEA SPE=ON ABB=ON PLU=ON L47 AND L50
 L59 73 SEA SPE=ON ABB=ON PLU=ON L47 AND L39
 L60 51 SEA SPE=ON ABB=ON PLU=ON L59 AND L53
 L61 6 SEA SPE=ON ABB=ON PLU=ON L60 AND (1802-2006)/PRY,AY,PY
 L62 11 SEA SPE=ON ABB=ON PLU=ON L57 OR L61
